Science from Sarah ...

Humans shouldn't intersere with the evolution of plants and animals: 1/10 = I strongly agree. Mere is abot of indence around ustrat explains the process of Homans shouldn't intersere with the evolution of plants and animals: 1/10 = Strongly Agree because animals evolved to 1/10 = Strongly Agree because the strong is like 1/10 to cover up mistakes that you think 1/10 happened but never really clid.	Evolution:
Homan activity on earthis damaging environments and the 5: 8/10 = I Agree	wayspecies evolve.
Studying the way species evolve is important: 10/10 - I strongly eigree because is we didn't study evolution we wouldn't know about extinced animals and past worlds and climates, we would only know about the animals that are going extended, the world we live in now and the climate w.

	. Humans are more important than other spices. 2
	I disagree with this because all species are valuable and animals help us in lots of different ways.
	Hunds have a responsability to protect endangered species. 8
rly Storn.	Species, 8
1	I think that humans derainably have a responsability
	I think that humans decinally have a responsibility to protect some species altogether so that they don't die out completely.
SEUR	die out completely
Just	There is lots of evidence all around us that helps explain the process of evolution.
4	explain the process of evolution. 8
w.	To anea with this cassile are a great wall
5	I agree with this, possils are a great way or understanding how evolution works.
	Humans should not interfere with the evolution
0	Humans should not interfere with the evolution of plants and animals through a cross-pollination and selective breeding. 4
	and selective in certainy. 4
, t	luman activity on Earth is damaging environments
a	luman activity on Earth is damaging environments and expecting the way species evolve. 9
He	mans have charged the way species live by aking land sor sarring and howsing this has runt had some species how had to change habitat
ll H	hal come condice had a had to Harrow habitat
Of	die aut Hurans have also hunted animals,
el	exacts carthere tusks tracing (at there skins and
Th	those for there horns this has lead to many species becoming endangered or even extinct.
	becoming endangered or even extinct.
.st	uding how species evolve is important I

Sophie earned 122 stamps (the highest this school year ©) and gained her medal for walking 65 miles

Year 6 leavers 2020
