

Class 3 home learning

Term 4 – week 1

Eliza

I miss my cousin's house because
I miss my cousin's house in California
I would love to visit one of my friends in Utah because
we were supposed to go last year but it got cancelled
because of the first lockdown and then we were supposed
to go in October then it got cancelled and were
supposed to go this year but it's probably going to get
cancelled again.

Dear Winkie's mom,
I love you guys for the most part but they're noisy. I've put up with it for now but by the end of the year we're going to try to do something about it.
I'm not trying to be rude but we're going to be doing
that by the way.
The good things about them is that if you're not at night
it's very good thinking because we're making it good
and you're not they're not and we're not
not good.
So remember that all of us and also that's the
love, Sincerely
Eliza

Rivers - Eliza

Uses of rivers

Write a short paragraph to explain each use of rivers.

 The first paragraph describes how rivers provide a natural habitat for various animals, such as birds, fish, and insects. It mentions that the water and surrounding vegetation are essential for their survival and reproduction.

 The second paragraph explains that rivers are crucial for agriculture. They provide water for irrigation, which allows farmers to grow crops in arid or semi-arid regions. This water is essential for the growth and yield of various agricultural products.

 The third paragraph discusses the use of rivers for hydroelectric power. Dams are built across rivers to capture the kinetic energy of flowing water and convert it into electricity. This is a renewable energy source that helps reduce dependence on fossil fuels.

 The first paragraph describes how rivers are used for recreation and tourism. People enjoy activities like fishing, boating, and swimming in rivers. These activities contribute to the local economy and provide a source of relaxation and enjoyment.

 The second paragraph explains that rivers are vital for urban development and industry. They provide a source of water for drinking, sanitation, and industrial processes. Many cities are built along rivers because of the water supply and the ease of transportation.

 The third paragraph discusses the use of rivers for transportation and trade. Rivers provide a natural highway for goods and people. Large cargo ships and smaller boats can transport goods and passengers efficiently, reducing the cost and time of travel.
